Rental Booking App (Tables, Chairs & Karaoke Sets)

Project Description

The **Rental Booking App** is a web and mobile-based reservation system that allows customers to conveniently book **tables, chairs, and karaoke sets** for birthdays, weddings, reunions, corporate events, fiestas, and other special occasions.

Instead of contacting the rental business through calls or social media, customers can browse available rental items, check real-time availability, select quantities, choose their event date, and submit a booking request online. The system automatically manages inventory to prevent double bookings and helps rental businesses organize reservations, deliveries, pickups, and payments.

The application provides separate interfaces for customers and administrators, ensuring a smooth booking experience while simplifying inventory and reservation management.

Objectives

- Digitize the rental booking process.
- Eliminate manual reservation tracking.
- Prevent overbooking of rental items.
- Provide customers with an easy online booking platform.
- Improve inventory monitoring.
- Track deliveries, pickups, and rental status.

Target Users

- Rental Business Owners
- Staff/Employees
- Customers

Core Modules

Customer Module

User Registration

- Sign up using email or mobile number
- Secure login/logout
- Password recovery

Profile Management

- Personal information
- Contact details
- Delivery addresses
- Booking history

Rental Catalog

Customers can browse rental items by category.

Categories

- Chairs
- Tables
- Karaoke Sets

Each item displays:

- Photos
- Description
- Rental price
- Available quantity
- Rental terms

Search and Filter

Customers can search by:

- Item name
- Category
- Price range

Availability Checking

The system automatically checks:

- Event date
- Available inventory
- Reserved quantities

Unavailable items cannot be booked beyond the remaining stock.

Booking System

Customers can:

- Select rental date
- Select return date
- Choose rental items
- Enter quantity
- Review booking summary
- Submit booking request

Booking Summary

Displays:

- Selected items
- Quantity

- Unit price
- Rental duration
- Delivery fee
- Total amount
- Reservation fee (if applicable)

Booking Confirmation

After submission:

- Booking Reference Number
- Booking Status
- Confirmation notification

Possible statuses:

- Pending
- Approved
- Reserved
- Out for Delivery
- In Use
- Returned
- Completed
- Cancelled

Payment Module

Supports:

- Cash on Delivery
- Cash on Pickup
- Bank Transfer
- GCash
- Maya

Features:

- Reservation payment
- Remaining balance
- Payment history
- Digital receipts

Notifications

Customers receive notifications for:

- Booking received
- Booking approved
- Payment received
- Delivery schedule
- Pickup reminder

- Booking completed

Administrator Module

Dashboard

Displays:

- Today's bookings
- Pending requests
- Active rentals
- Available inventory
- Monthly revenue
- Most rented items

Inventory Management

Add/Edit/Delete rental items

Manage:

- Item Name
- Category
- Description
- Rental Price
- Quantity
- Images
- Status

Item Status:

- Available
- Reserved
- Out for Delivery
- In Use
- Under Maintenance

Booking Management

View all bookings

Approve or reject requests

Assign booking status

Generate booking reference

Monitor rental schedule

Calendar View

Monthly calendar showing:

- Deliveries
- Pickups
- Reserved dates
- Available schedules

Customer Management

Manage:

- Customer information
- Booking history
- Outstanding balances
- Contact information

Delivery Management

Manage:

- Delivery schedule
- Pickup schedule
- Delivery address
- Assigned personnel
- Delivery status

Payment Management

Track:

- Reservation payments
- Remaining balances
- Fully paid bookings
- Refunds

Generate payment receipts.

Reports

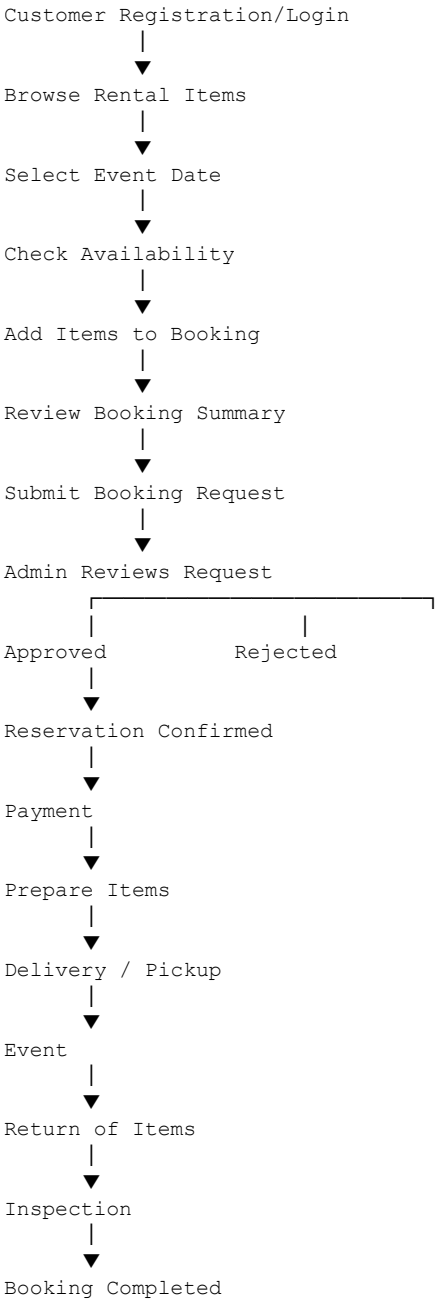

Generate reports for:

- Daily bookings
- Weekly bookings
- Monthly bookings
- Revenue
- Inventory usage
- Most rented items
- Cancelled bookings

Export to:

- PDF
- Excel
- CSV

Rental Workflow

Inventory Tracking

The system automatically updates inventory throughout the rental lifecycle:

- Available Stock

- Reserved Stock
- Out for Delivery
- Currently Rented
- Returned Stock

This prevents double-booking and ensures accurate availability.

Security Features

- Secure user authentication
- Role-based access (Admin and Customer)
- Password encryption
- Booking reference generation
- Audit logs for inventory and booking updates

Future Enhancements

The system is designed to be scalable. Future versions can include:

- Additional rental items (tents, decorations, catering equipment)
- Package bundles (e.g., 50 chairs + 10 tables + karaoke)
- Online contracts and digital signatures
- QR code for booking verification
- GPS delivery tracking
- SMS notifications
- Loyalty rewards
- Customer reviews and ratings
- Promotional discounts and coupons
- Multi-branch inventory management

This scope provides a solid foundation for a rental management platform while remaining focused on the initial business needs of renting **tables, chairs, and karaoke sets**. It is practical for a capstone project or a real-world rental business and can be expanded as the business grows.
